Art Unit: 1714

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1, 3-6, 8-12, 15, 23-24, 28, 30-43, and 50 are rejected under 35 U.S.C. 102(b) as being anticipated by US Pat. No. 3119801 Haskell.

Haskell discloses the instantly claimed method of separating a mixing of polymers at column 1, lines 10-57 and the remainder of the document. Agitation falls within the scope of shearing.

4. Claims 1-50 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Pat. No. 5198471 Nauman et al. in combination with US Pat. No. 3119801 Haskell.

Nauman discloses the instantly claimed means of separating the instantly claimed polymer mixtures but does not disclose the instantly claimed shearing step. See the entire document. It would have been obvious to one of ordinary skill in the art at the time of the instant invention to shear the solutions of Nauman because Nauman states that "conventional techniques for extracting a polymer from a solvent can be used" in the abstract and Haskell shows the use of shear to be a conventional technique

for precipitating polymer from a solution and the ordinary skilled artisan would have expected the benefits of using shear to precipitate the polymer of Haskell in the final product of Nauman.
